

📌 **SIHEDAF**

Sistem Hemat Energi Detektor Atrial Fibrilasi

TELKOM UNIVERSITY

WHY?

Stroke has become the cause of death in almost all hospitals in Indonesia, Stroke accounted for 14.5% of total deaths. According to basic health research data 2013, the prevalence of stroke in Indonesia reached 12.1 per 1000 population, it number has increased compared to 2007 of 8.3 percent.

stroke cost health services:

- 1.43 trillion (2016)
- 2.18 trillion (2017)
- 2.56 trillion (2018)

"the main causes of stroke are hypertension and Atrial Fibrillation"

Usually AF is detected using an ECG but it's **Hard to operate and limited supplies.**

SOLUTION WE OFFERED

Sistem Hemat Energi Detektor Atrial Fibrilasi or knowns as SIHEDAF acts as an AF detector in the form of watch to detect early stroke.

The watch will sound an alarm if the user shows signs of stroke. The alarm that rang not only provides information to the user but also on the android application or web so the doctor or family of the user can also know the information. SIHEDAF has a heart rate sensor on the back of the watch which, if used, the heart rate signal can be seen directly on the watch screen.

Furthermore, SIHEDAF also has technology that can send signals in real time so that heart rate signals can be monitored anywhere.

SIHEDAF AF monitor based on the Photoplethysmogram (PPG) signal

High Sensitivity (90%)

Alerts

Energy Saving

Affordable prices

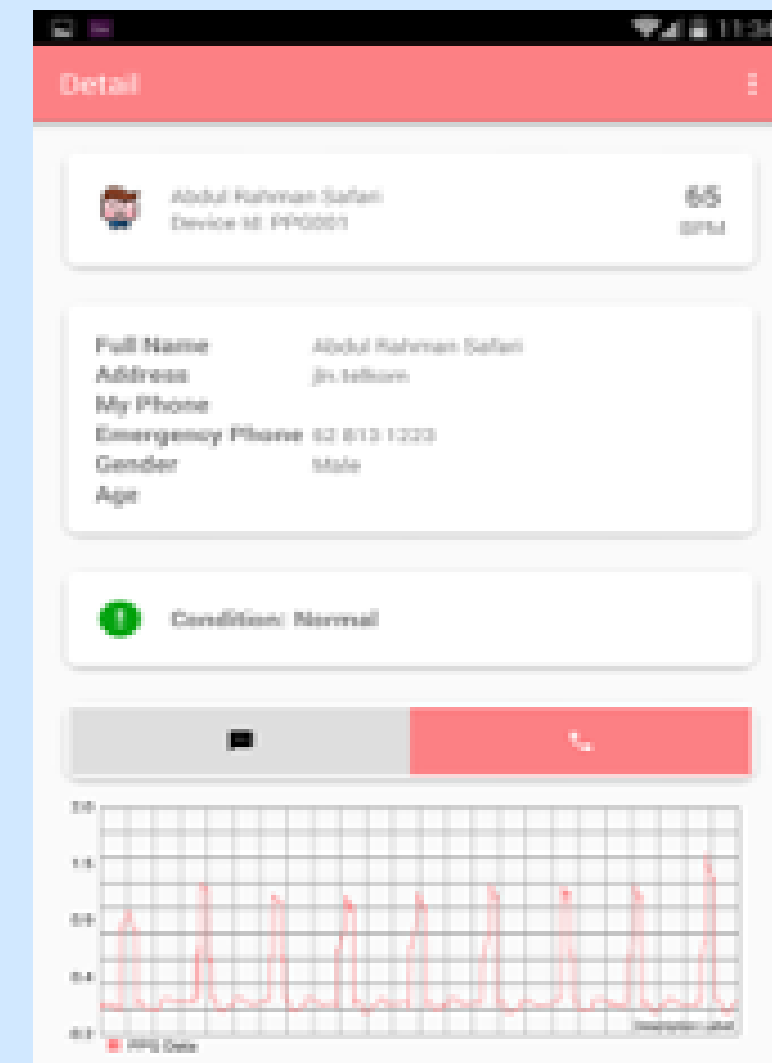

The user of SIHEDAF can directly use the watch and install the Android apps so that they can monitor the AF signal independently because it is easier to use compared to ECG and also the apps are easy to understand.

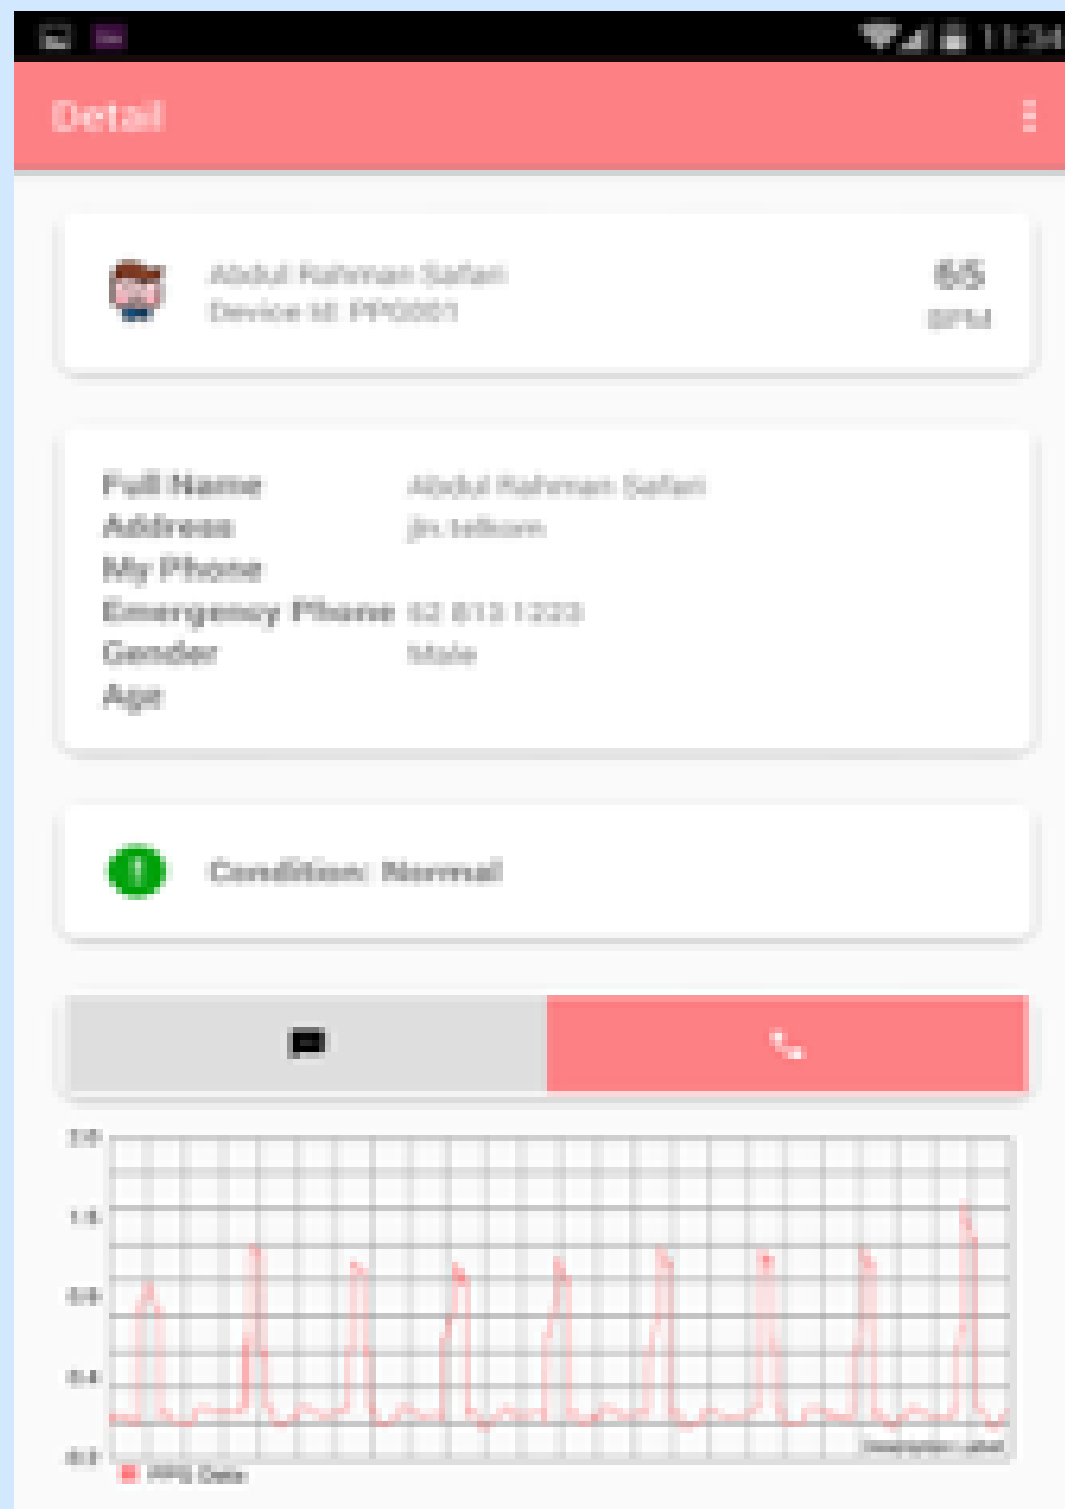

- The safety of using the product can be guaranteed safe
- Using Bluetooth communication which is very secure and harmless to users with using radio waves operating in the 2.4 GHz frequency band (2400 – 2483.5 MHz).
- for product security features, patient data will be maintained and not leaked to the public.
- to maintenance the product is also very easy
- To do the recycling of SIHEDAF, all you have to do is hand it over to the e-waste community for recycling.

3 Components of SIHEDAF

- **Data Acquisition Unit (DAU) – Wristband PPG (the watch)** used to collect data will continue to be sent via bluetooth
- **Data Processing Unit (DPU) – arrhythmia server** that can detect the presence of AF with an accuracy above 90%
- **Client Monitoring Application (CMA) – Android Apps or Web based Application**

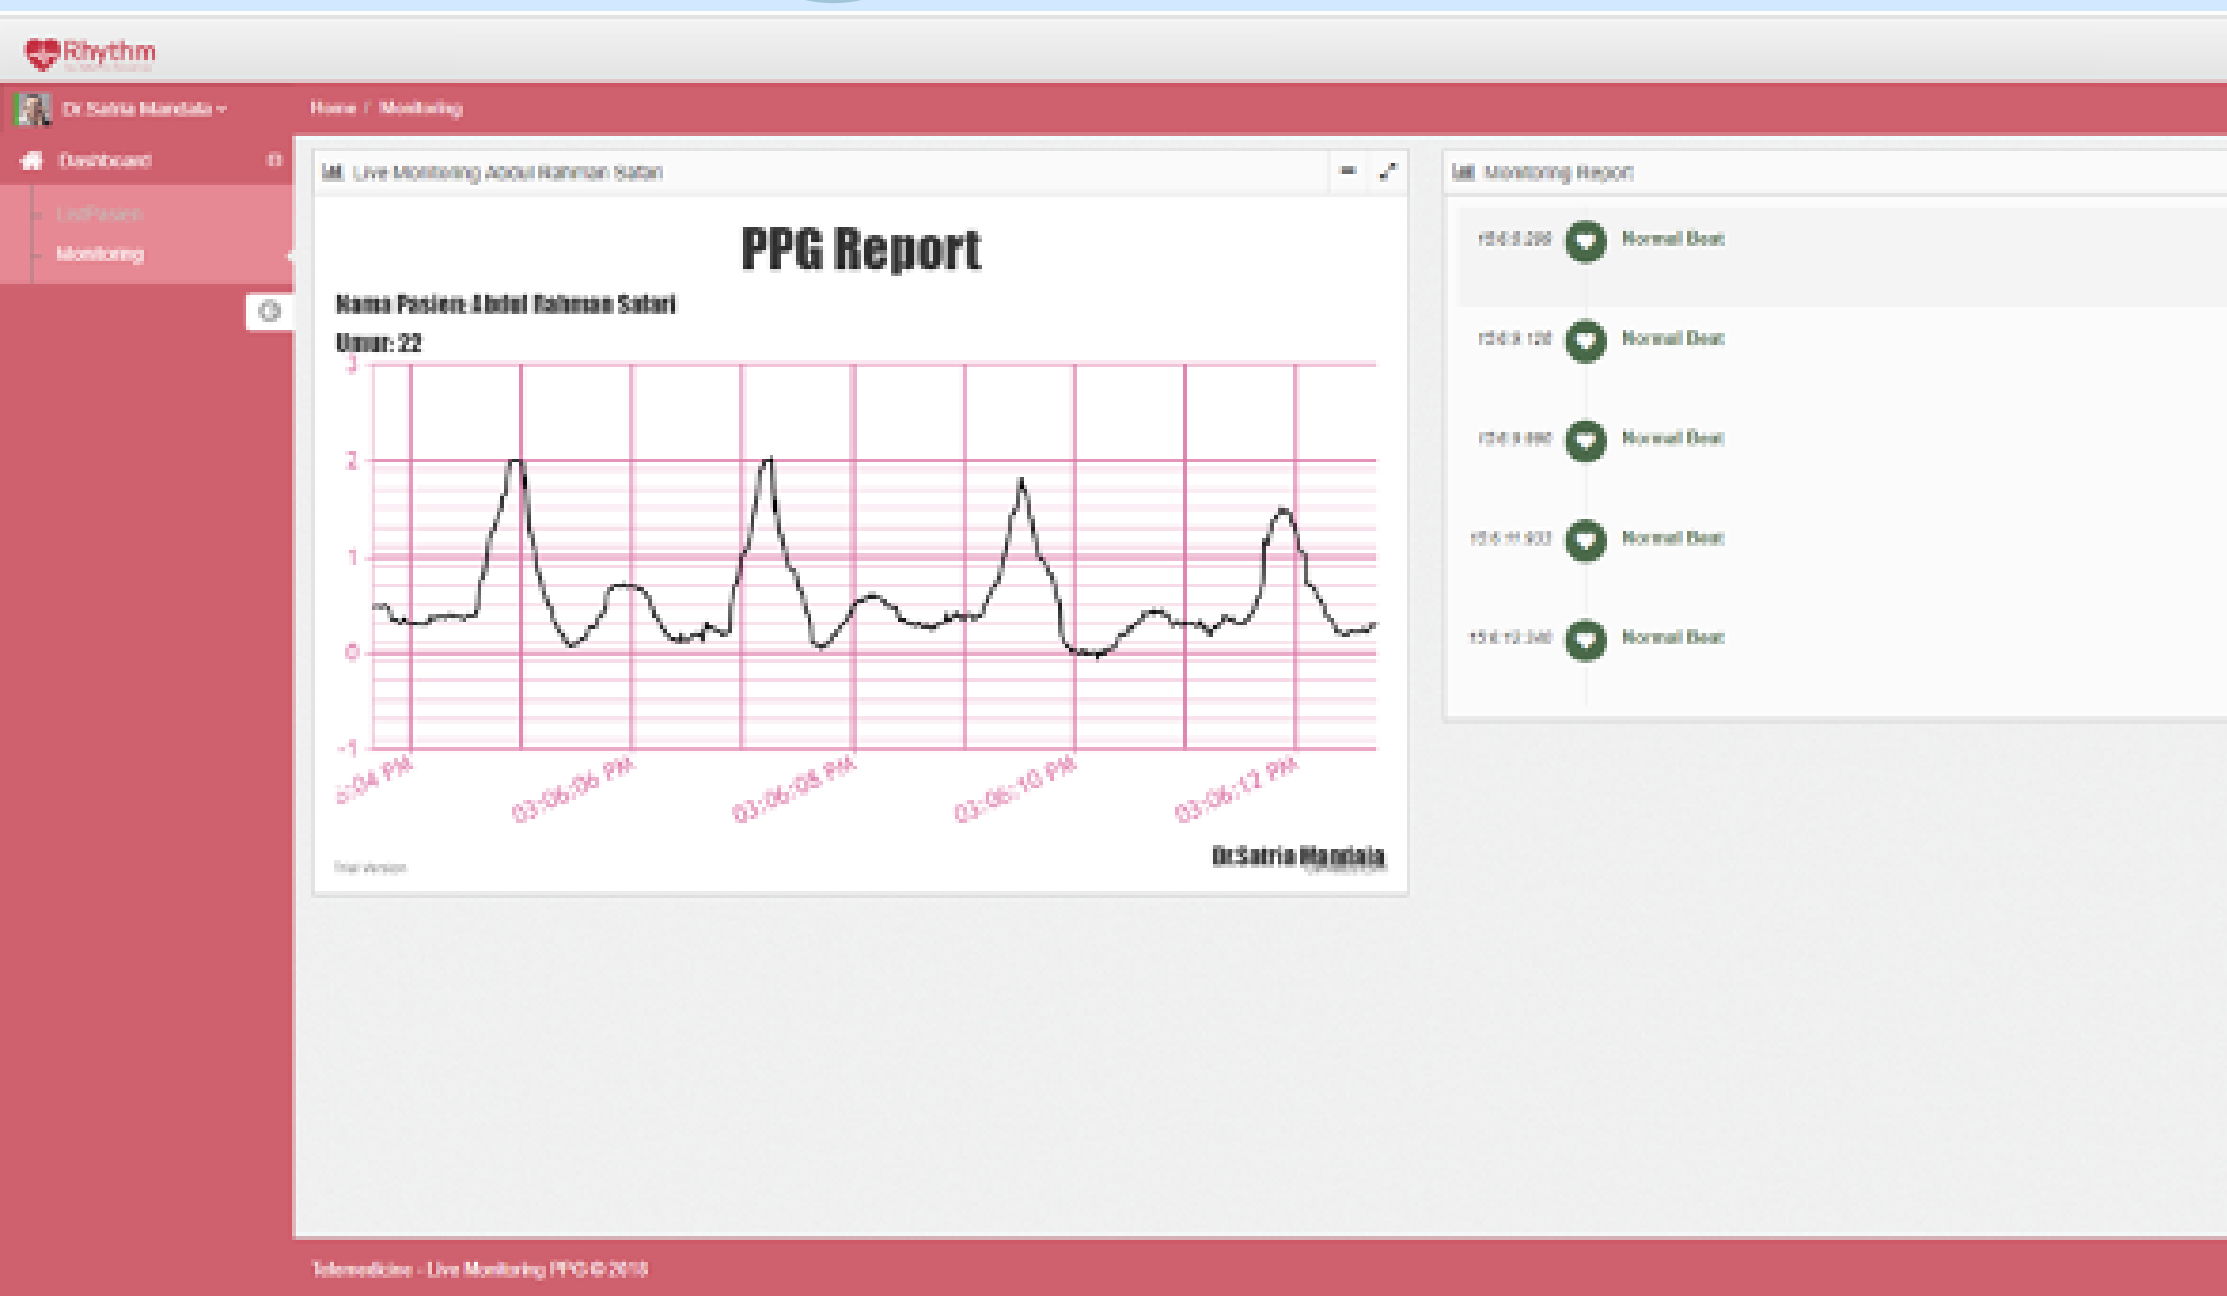

THE FUNCTION OF ANDROID APP

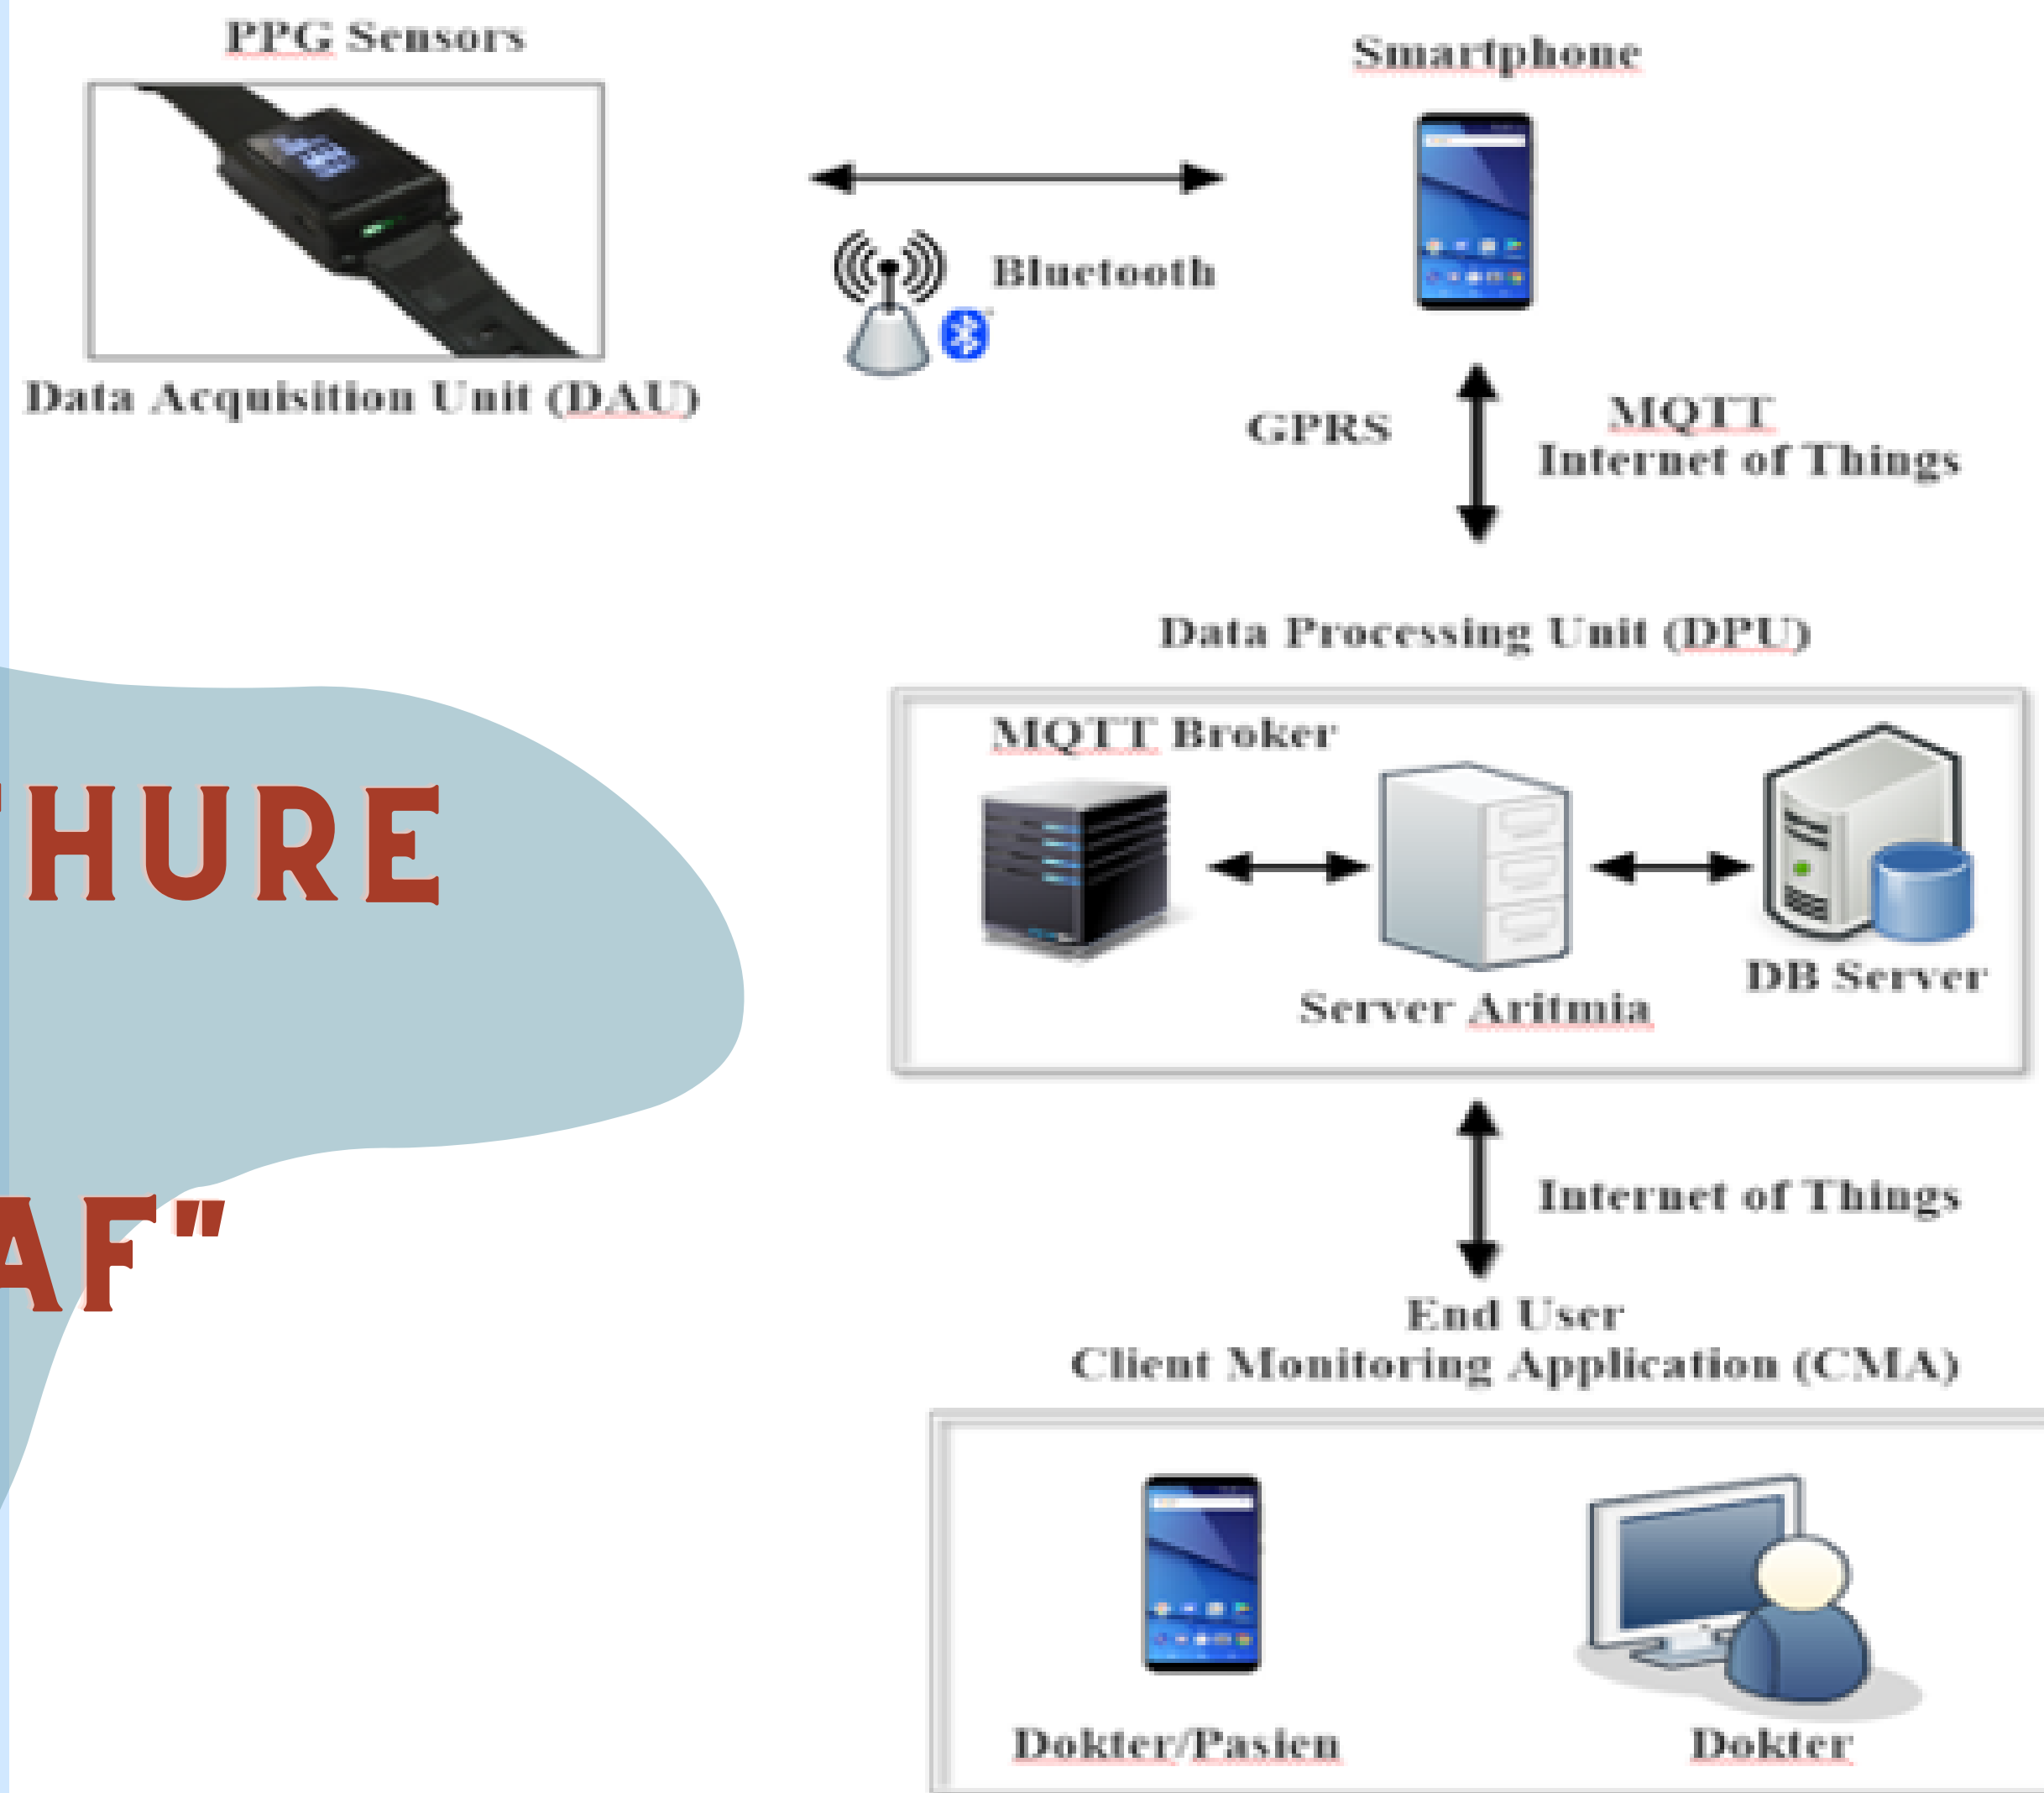

1. as a liaison between the device and the server using bluetooth communication and forwarded to the server using the MQTT protocol
2. as a direct monitoring that have a

THE FUNCTION OF WEBSITE

1. as direct monitoring, patient register, indirect AF detection
2. as a device that is to retrieval data or PPG signal data collector and sent to bluetooth using the MAX30102 sensor which has high sensitivity and the data will be processed in a microcontroller using ESP32 and sent to android via bluetooth.

Judul Title	Internet Of Things (IoT)/WEARABLE Device Pengumpul Data Arteria Berbasis Sinyal Photoplethysmogram (PPG)
Abstrak Abstract	Photoplethysmography memberi harapan baru untuk mendeteksi arteria berbasis low-cost optical device yang dapat diujikan sebagai aksesoris kesehatan, seperti smartband (gelang). Namun demikian implementasi tentang hal ini belum banyak dilakukan, utamanya smartband PPG berbasis Internet of Things (IoT). Untuk hal tersebut, inovasi ini menguraikan pengembangan Wearable Sistem Monitoring Arterial Filtration sebagai device pengumpul data arteria, khususnya Arterial Filtration (AF) yang memuat sirkuit sistem yang dikembangkan terdiri dari sensor PPG, mikrokontroler dan perangkat komunikasi (WiFi dan Bluetooth low-energy (BLE)). Hasil test yang dilakukan di Direktorat Jenderal Pelayanan Kesehatan Balai Pengamanan Fasilitas Kesehatan (BPPK) Jakarta pada tahun 2018 menunjukkan bahwa device tersebut aman digunakan. Berdasarkan uji fungsi yang dilakukan di Universitas Telkom pada tahun yang sama, device juga dapat berfungsi dengan baik dalam pengiriman data dari sensor ke server.

SURAT PENCATATAN CIPTAAN

Dalam rangka perlindungan ciptaan di bidang ilmu pengetahuan, seni dan sastra berdasarkan Undang-Undang Nomor 28 Tahun 2014 tentang Hak Cipta, dengan ini menerangkan:

Nomor dan tanggal permohonan : EC00201982827, 19 November 2019

Pencipta

Nama : SATRIA MANDALA, ANNISA RIZKI PRATIWI WIBOWO,
Alamat : Jl. Polowijen III 377B RT.02 RW.04 Desa Polowijen Kec. Blimbing, Malang, Jawa Timur, 65126

Kewarganegaraan : Indonesia

Pemegang Hak Cipta

Nama : Universitas Telkom
Alamat : Jl. Telekomunikasi Terusan Buah Batu Dayeuhkolot, Kabupaten Bandung, Jawa Barat, 40257

Kewarganegaraan : Indonesia

Jenis Ciptaan : Program Komputer
Judul Ciptaan : WavelAF

Tanggal dan tempat diumumkan untuk pertama kali di wilayah Indonesia atau di luar wilayah Indonesia : 19 November 2019, di Bandung

Jangka waktu perlindungan : Berlaku selama 50 (lima puluh) tahun sejak Ciptaan tersebut pertama kali dilakukan Pengumuman.

Nomor pencatatan : 000165175

adalah benar berdasarkan keterangan yang diberikan oleh Pemohon.
Surat Pencatatan Hak Cipta atau produk Hak terkait ini sesuai dengan Pasal 72 Undang-Undang Nomor 28 Tahun 2014 tentang Hak Cipta.
